How to use the Guide.

This guide is meant to help build a European School. It aims to internationalise certain aspects of a school system.

We gathered informations on the aspects which are most important to us. So read the guide carefully :)

Where it begins: Teacher training programme:

Here we cover what's important for a quality teacher education in order to set a quality foundation.

1. *Practical Informations!* - It's important to make the education close to the real life and not stuff it with too abstract information. It could lead to a decrease of potential teachers due to the lack of interest.

2. *Early internship:* In order to improve the Quality of the education, the first internship should be as early as possible. In order to see for the students if they are compatible with the teacher profession.

3. *Personal skills:* A teacher should be aware that they aim to always improve their lessons and that they should always be up to date. Life long learning!

A motivated teacher has motivated students!

School Climate:

A good school climate improves the learning of every student. Which also includes topics like: positivity, Security, Motivation, Support.

1. *Positivity:* As a teacher you should always aim to be positive. So you don't discourage the students.
2. *Security:* If a student doesn't feel well they can't learn as well. A school has to be a safe place for everyone.

3. *Support:* Every one makes mistakes! As a teacher you should always support your students. Therefore its important to stay calm as well.
4. *Diversity:* The Diversity of the school community should be promoted and supported. In order to create a school for everyone. And the students will learn from each other.

School measures:

1. *Extracurricular programmes:* Learning shouldn't be limited by the classroom. Get out of that walls! As a teacher you can make small or bigger trips on which the students learn to open up and get out of their comfort zone.

2. *School Exchanges:* By doing exchanges, the students learn more about other cultures and themselves. They grow as a person and become confident in their doings.

3. *Prevention:* Agreeing with the safety aspect from earlier. No one should feel bad in a school. So a good school should have prevention methods against all kinds of physical and mental illnesses. As well as not allowing bullying

Further Innovations:

1. *Feedback system:* Feedback is given not only to students but also to teachers. The students and teachers give each other feedback in order to improve their lesson quality. Also parents can join the dialogue.

1.2. *Reporting and documenting performance:* The students set their own performance goals based on their individual learning paths. So they get more independent and learn to plan.

2. *Achieving something together:* With events and activities the school brings together the students, teachers and parents and improves their teambuilding.
